interviews <- read_csv(here("data/SAFI_clean.csv"), na = "NULL")</pre>
Rows: 131 Columns: 14
-- Column specification ------
Delimiter: ","
chr (7): village, respondent_wall_type, memb_assoc, affect_conflicts, items...
dbl (6): key_ID, no_membrs, years_liv, rooms, liv_count, no_meals
dttm (1): interview_date
```

i Specify the column types or set `show_col_types = FALSE` to quiet this message.

i Use `spec()` to retrieve the full column specification for this data.

Introduction

This is an *introduction*. A **VERY** brief introduction. This text is just filler because I need to show how line breaks work.

Oh yea, we should talk about SAFI. The dataset.

Materials and methods

The SAFI dataset has the following variables:

- village
 - name of village
- interview_date
 - date of the interview
 - * self-explanatory
- no_members
- years_liv

Here are my favourite variables:

- 1. no_members
- 2. village
- 3. years_liv

Results

```
interviews %>%
  filter(!is.na(memb_assoc)) %>% # remove NAs
  group_by(village, memb_assoc) %>%
  summarise(mean_no_membrs = mean(no_membrs))
```

`summarise()` has grouped output by 'village'. You can override using the `.groups` argument.

A tibble: 6 x 3 # Groups: village [3] village memb_assoc mean_no_membrs <chr> <chr> 1 Chirodzo no 8.06 2 Chirodzo yes 7.82 3 God no 7.13 4 God 8 yes 5 Ruaca 7.18 no 6 Ruaca yes 9.5
